Attn- Mr. Eli Margalit, Managing Director

Dear Eli,

Congratulations! You have developed a unique system! Your ColorSave 1000 helps us a lot, and saves us money and time!

6 months ago you and one of your engineers came to my factory and claimed that you have a gravimetric solution for color feeding. We have in our factory 24 molding injection machines, and it was clear to me that if your solution works, it would help us a lot.

I was more than surprised to see that your weighing system is accurate, and therefore very helpful.

Not only that it saves us money, it also saves us time because we do not need to waste 20-30 minutes on calibration each time we "move" from color to color.

Above all it stabilized the color feeding, and improved our product quality remarkably.

Until now we have bought from you 10 systems.

My intention is to purchase your systems and connect them to each and every molding injection machine in the factory.

Best Regards,

Gilad Golan
Technical Manager
